Roessner Hall Classroom 205 VHS Support

1. Once you have the VHS cart in the classroom, locate the VHS wall plate pictured below.

   ![VHS Wall Plate](image1)

   It is located along the front wall of the classroom, below the whiteboard in all Roessner Hall classrooms.

2. Locate the RCA cables hanging from the back of the VHS player. The ends of the cables are color coded as well as the wall plate connections. Plug in each end of the RCA cable to the matching color on the wall plate.

3. Locate the power cable hanging from the back of the VHS player and plug it into an electrical outlet.

4. Press the power button on the VHS player to power on the device.

5. Once the VHS player is connected and powered on go to the control panel at the room’s podium. From the main page select the “AUX” input shown in the photo below.

   ![Control Panel](image2)

6. If the system has not yet been started, press the “AUX” button to turn on the projectors and lower the projection screen. Since the video signal is from a VHS player, nothing will be shown on screen until a VHS tape is inserted into the player and played.

7. Insert the VHS tape into the player and press play. You should now be able to see the video you inserted playing on the screen. VHS tapes can only be viewed on one of the projection screens.

8. To adjust the volume level of the video you can use the control panel’s volume adjustment buttons as usual.

9. When you are finished using the VHS player disconnect all cables from the wall and place them back into the cart.

If you have followed these steps and are still having problems with the technology contact the Help Desk via STAT at 610-921-7828.
