Roessner Hall Classroom 205 Documentation

Advanced Control Features

The advanced control features cover the room’s lighting condition, the volume level of individual audio inputs that can be heard simultaneously, and advanced input selections. The buttons used to access these features are on the main page of the controller in the lower right corner.

Lighting Control:

- Pressing the “Lighting Control” button will bring you to the page pictured below.

- From this page you can make a lighting adjustment in the room by pressing one of the buttons on the left side of the screen. The text to the right of each button gives a short explanation of how the lighting will be adjusted based on your selection.

- When you have made the necessary adjustments to the lighting in the room use the “Return” button in the top right corner to return to the main page of the controller.

If you have followed these steps and are still having problems with the technology contact the Help Desk via STAT at 610-921-7828.
Audio Control:

- Pressing the “Audio Control” button will bring you to the page pictured below.

![Audio Control Image]

- The audio levels in the picture above are all able to be adjusted independent of each other from this screen.

- The “Mic/Mixer Feed In” input is not in use at all times by default and requires a separate microphone or device to be connected to the port on the podium. It is an available connection that has a constant feed to the audio system. Most classes/Faculty members will not need to utilize this feature.

- The “Lectern Mic” volume level will adjust the volume level from the microphone on top of the podium. The microphone can also be muted from this page if needed.

- The “Wireless Mic” volume level will adjust the volume level from the wireless mic found inside the podium. The wireless mic can also be muted from this page if needed.

- The “Ceiling Mics” volume level will adjust the volume level of the audio that is used for teleconferencing in the room. If the person you are in a video conference with is having a hard time hearing you, you will want to turn this inputs volume level up.

- The “Main Output” volume level will adjust the overall volume for the entire AV system including program audio from input devices such as a laptop or the built-in PC. This is basically the same volume controls as on the main page of the controller. The main output audio can also be muted from this page.

- When you are finished adjusting the volume levels use the “Return” button in the top right corner to return to the controller’s main page.

If you have followed these steps and are still having problems with the technology contact the Help Desk via STAT at 610-921-7828.
**Advanced Selection:**

- Pressing the “Advanced Selection” button will bring you to the page pictured below.

- From this screen you can control the content being shown on the projection screen and confidence monitor. You can also raise the projection screens up and down and power on and off the projectors. The buttons on the screen are labeled clearly as to what they will do when pressed.

- When you are finished making your selections press the “Return” button in the top right corner to return to the controller’s main page.

If you have followed these steps and are still having problems with the technology contact the Help Desk via STAT at 610-921-7828.
