

Albright College – IT Services
Wireless Networking
Login Process for Albright SSID – New Students/First Time Use

To connect to Albright’s wireless network and the Internet, please read and follow the instructions below:

Requirements:

- You must know your username and password
- Your computer’s wireless card drivers needs to support WPA/WPA2 Enterprise (this may require a driver update)

If you do not know your account name and password or need assistance updating your wireless card drivers, please contact Albright College’s IT Services Helpdesk for assistance at:

- Phone (610) 921-7676
- E-mail helpdesk@albright.edu

Process:

1. Locate the available wireless networks and connect to the “Albright” SSID.
2. You should be prompted for your username and password.
3. Please enter your username and password.
4. Your computer will go through an account verification process. If your username and password are correct your computer should be successfully connect to the “Albright” wireless network.

Albright requires that all computers attached to the “Albright” wireless network have up-to-date anti-virus protection. The next steps will complete the anti-virus verification process.

1. Launch a web browser
2. The Safe Connect service will automatically redirect your web browser to the Safe Connect web page.
3. Follow the instructions for downloading and installing Safe Connect client.
4. Once this is complete Safe Connect will verify the status of your anti-virus program.
 - If antivirus software is functioning properly, student is granted full access to the Internet.
 - If antivirus is not functioning properly, the computer is redirected to anti-virus remediation tools.
5. Once anti-virus software is working properly, Safe Connect will confirm your computers status and allow full access to the internet.
6. Your computer is now connect to the Albright College network and Internet
